Recommendation Letter – Mohamed Tawhid

Dear Sir or Madam,

I had the pleasure of supervising Mohamed Tawhid during his 6-month internship as an Energy Data Space Engineer at ENTSO-E. As his day-to-day supervisor, I worked closely with Mohamed on a daily basis, and I can confidently say that he was technically proficient and proactively engaged interns I have had the opportunity to mentor.

Mohamed was embedded in the Information Communication Technology Team, where he took ownership of critical tasks related to the Common European Energy Data Space (CEEDS). What immediately set him apart was his ability to take high-level technical concepts—such as federated architecture, semantic interoperability, and trust frameworks—and translate them into concrete, actionable contributions. He didn't just complete tasks; he questioned assumptions, proposed improvements, and consistently delivered work that exceeded expectations.

Technical Skills & Proficiency:

Mohamed demonstrated a deep and practical understanding of the technical building blocks behind data spaces, from evaluating existing frameworks to contributing to our internal architecture discussions on connectors, trust frameworks, and semantic interoperability. He excelled at grounding abstract concepts, moving our team toward concrete, problem-driven use cases by analyzing real-world EV charging scenarios and mapping the end-to-end data flows that enable grid flexibility. Beyond strategic thinking, Mohamed was always comfortable diving into the technical details—preparing slides on technical topics—and he consistently impressed with his ability to grasp the complex interplay between real-time telemetry, market signals, and governance data.

Interpersonal Skills, Communication & Networking:

Perhaps Mohamed's greatest strength is his ability to communicate complex technical ideas with remarkable clarity, whether preparing presentations for technical working groups or distilling our work for business audiences. His final presentation to the Data Interoperability and Access Working Group (DIA WG) was a standout moment—he didn't just present slides, he told a compelling story about how CEEDS enables Europe's energy transition. Beyond his communication skills, Mohamed quickly built trust and credibility with external stakeholders, participating in high-level meetings with European TSOs and the Commission, contributing to the drafting of ENTSO-E's positions, and becoming a reliable point of contact for the Smart Energy Expert Group workstream. This workstream plays a central role in shaping the Common European Energy Data Space, bringing together TSOs, the European Commission, and industry experts to define the technical and governance frameworks for secure, interoperable energy data exchange across Europe. Throughout Mohamed's internship, he demonstrated exceptional proactivity and collaboration—never waiting for instructions, but instead identifying gaps, proposing solutions, and working seamlessly with colleagues across the team to drive our shared objectives forward.

Personal Qualities:

Mohamed is intellectually curious, highly motivated, and genuinely passionate about the energy transition. He approaches challenges with a problem-solving mindset and is not afraid to ask the right questions. His ability to juggle multiple responsibilities—from technical analysis to policy coordination to presentation preparation—demonstrates excellent time management and maturity.

In summary, Mohamed was a vital contributor to our team's success. He possesses the rare combination of deep technical understanding, strategic thinking, and exceptional communication skills. I am confident that he will excel in any future role, whether it be in energy systems, digital infrastructure, or technology policy.

I recommend Mohamed without any reservation. He would be a tremendous asset to any organization. Please feel free to reach out to me if you have any further questions.

Best regards,
Panagiotis Varelas
Demand Response Data Advisor, ENTSO-E
