Recommendation Letter – Mohamed Tawhid

Dear Sir or Madam,

I am pleased to write this letter of recommendation for Mohamed Tawhid, who completed a 6-month internship with the ICT Architecture & Interoperability Team at ENTSO-E from 1 February to 31 July 2026. During this time, Mohamed worked under my supervision as an Energy Data Space Engineer, and he made significant and valuable contributions to our work on the Common European Energy Data Space (CEEDS). Mohamed joined ENTSO-E at a pivotal moment, as the European Commission was accelerating the development of CEEDS and our members — the European Transmission System Operators (TSOs) — were actively shaping the initiative's technical and governance frameworks. His role was to assist in coordinating our participation in the Smart Energy Expert Group workstream.

Key Achievements and Contributions:

- **Technical Analysis and Gap Identification:** Mohamed demonstrated a strong analytical ability by identifying critical gaps and opportunities for TSOs within the current CEEDS workstream. He conducted a detailed evaluation of existing data spaces like EDDIE, Data Cellar, and Omega-X, proposing best practices for governance and technical design. His work was instrumental in forming our position, particularly around the need for a "problem-driven" scope and the adoption of existing standards (CIM/ESMP) rather than creating new, incompatible ones.
- **High-Level Stakeholder Coordination:** He successfully engaged with experts from European TSOs, the European Commission, and industry bodies. He helped draft and promote ENTSO-E's position ahead of important high-level meetings and contributed to internal strategy sessions. His ability to distill complex technical and policy issues into clear, actionable briefs was exceptional.
- **Presentation and Communication:** Mohamed has a unique talent for translating complex technical concepts into engaging and informative presentations for both technical and business groups. He prepared insightful content and played a key role in preparing presentations for the Data Interoperability and Access Working Group (DIA WG). His final presentation, which synthesized his work on the four priority use cases for flexibility, was a testament to his ability to see the big picture and communicate it effectively to experts in the field.
- **Development of the CEEDS Vision:** Mohamed was deeply involved in the technical architecture discussions. He contributed to our understanding of federated data spaces, connector gateways, trust frameworks, and vocabulary hubs. He worked on mapping the end-to-end data flow for flexibility, bridging the gap between abstract concepts like "data sovereignty" and concrete implementation challenges.

Mohamed's performance stood out for his proactivity, intellectual curiosity, and his ability to work independently while also being a collaborative team player. He consistently went beyond his immediate duties, showing a genuine passion for the energy transition and a keen interest in understanding the interplay between energy systems, ICT, and regulation.

Mohamed is a highly motivated, capable, and reliable individual. I am confident he will be an asset to any organization he joins. I recommend him without reservation for any position that requires a combination of technical depth, strategic thinking, and excellent communication skills.

Please do not hesitate to contact me if you require any further information.

Best regards,

Olivier Aine

ICT Governance Deputy - Architectures Manager, ENTSO-E
